

# Workshop on Advanced Neutron Source and its Application

Date: November 5th, 2011

Place: Link Station Hall Aomori

Contents: An international workshop for discussion on development and application of advanced neutron sources will be held on 5th of November at Link Station Hall Aomori (the same place where ICFRM18 is held). Advanced neutron sources are now being planned and developed in conjunction to fusion neutron irradiation on fusion reactor materials, as well as application for industrial and medical purposes, such as production of radio-isotope medicine, BNCT, etc. In this workshop, development and application will be discussed for efficient and sophisticated R&D and operations for advanced neutron sources from variety of expert views.

Detailed information of the workshop will be posted on the Workshop web, in near future.
